

Digital, Media & Information Literacy.

Recognising the landscape, naming what you're seeing, and building the first habits to use straight away.

PROGRAMME

Building Resilience to Misleading Information

Three-day workshop series · Day 1 of 3

FOR

Young People

Bring something to write with · online resources provided

PRE-WORKSHOP SURVEY

Scan this before we start.

WHY WE'RE ASKING

A two-minute baseline so we can tailor the day to what you actually need.

A few quick questions on what you already know, what you use, and what you'd like to leave with. Your answers shape the discussion and the examples we come back to.

WELCOME TO DAY 1

What the next three sessions cover.

DAY 01 • TODAY

Digital, Media & Information Literacy

A working map of the landscape. The vocabulary to describe it. First habits to use straight away.

DAY 02

Reading Critically & Investigative Thinking

Persuasion tactics, bias, manipulation patterns, and how to question them.

DAY 03

Fact-checking & Verification

CRAAP, triangulation, AI-generated content, source-checking tools.

AVAILABLE THROUGHOUT

YOUR OWN NOTES

ONLINE RESOURCES

TAKE-HOME CHECKLISTS

REVISIT AT ANY TIME

Why we're here.

Three aims that hold the whole programme together.

AIM 01

Build resilience

to misleading information, so participants can recognise it, slow down, and decide what to do with it.

AIM 02

Understand reach

how widely misinformation operates across social, digital, and traditional media, and why no platform is automatically safe.

AIM 03

Equip to share

so participants can pass what they learn here on to friends and family, in their own words.

What today covers.

Three things, in this order.

A

A working map of the media landscape.

Where information comes from, how it travels, and why some routes are more reliable than others.

B

The vocabulary to describe what's happening inside it.

Misinformation, disinformation, propaganda, fake news, terms that sound similar and mean different things.

C

A first set of habits to use straight away.

Spot-checks, digital hygiene, and one closing exercise you can repeat with friends this week.

WHAT YOU'LL BE ABLE TO DO

Five things, by the end of Day 1.

01 Tell misinformation, disinformation, propaganda, and fake news apart.
Same family. Different intent. Different response.

02 Describe how traditional, digital, and social media differ.
Production, reach, funding, and where each fails.

03 Explain algorithms, filter bubbles, and echo chambers in your own words.
Plain language. To a friend who's never thought about it.

04 Identify your core digital rights and three practical hygiene habits.
What you're owed, and what you can do today.

05 Apply quick spot-checks to unfamiliar content.
Not a deep investigation. A 20-second filter to decide whether to slow down or move on.

01

Naming what you're seeing.

The first skill in media literacy isn't a checklist. It's a vocabulary. Once you can name what's in front of you, you can decide what to do with it.

SLIDES IN THIS SECTION

BEFORE WE DEFINE ANYTHING

An example to start with.

A piece of misleading content you've almost certainly already seen. What is it, exactly?

FOUND IN A GROUP CHAT. RESHARED 234,000 TIMES.

Concerned Citizen

posted 4h ago

BREAKING

They've been treating the tap water in major cities with something they don't want you to know about. Officials are staying silent. Wake up. Share this before it's taken down. 💧⚠️

234K SHARES · 18K REPLIES · 89K REACTIONS

NO SOURCE · NO SPECIFICS · NO WAY TO VERIFY
STILL SHARED 234,000 TIMES

THREE HOLDING QUESTIONS

- Q1

Where did you first see something like this?
- Q2

Did you believe it, share it, scroll past it, or argue with it?
- Q3

What would you call it, in one word?

Hold your one-word answer. We'll come back to it after the next four slides.

NO INTENT TO DECEIVE

Misinformation.

TERM · 01

Mis-

"They believe what they're sharing is true."

False or misleading information shared **without** intent to deceive.

Most of what you see is this. A friend forwards a screenshot. A relative posts an old photo with a new caption. They are not lying, they are mistaken, and they think they are helping.

EXAMPLE

"A friend shares a 'breaking' image from a disaster, the photo turns out to be five years old, from a different country. They genuinely thought it was current."

INTENT: NONE

RESPONSE: GENTLE CORRECTION

Don't shame. Don't reshare to dunk on. Quietly correct.

DELIBERATE

Disinformation.

TERM · 02

Dis-

"They know it's false. They want you to spread it."

False or misleading information shared **deliberately**, to deceive.

The intent is the entire difference. The content can look identical to misinformation. The person originating it knows it isn't true and is hoping you'll pass it on as if it were.

EXAMPLE

"A coordinated network of accounts posts the same fabricated 'leaked document' in the days before an election, the content is identical word-for-word across hundreds of profiles."

INTENT: DELIBERATE

RESPONSE: REPORT & DON'T SHARE

Even sharing it to mock it helps the algorithm.

NOT ALWAYS FALSE

Propaganda.

TERM · 03

Pro-

"True facts can still be used to mislead."

Information, often factually selective or emotionally loaded, used to promote a cause or point of view.

Propaganda is harder to spot than a lie. The trick isn't usually *what's said*, it's what's left out, what's emphasised, and how it's framed. The facts may check out. The story they add up to may not.

FRAMING

Which words are used, which images are paired with which facts.

OMISSION

What's missing, context, opposing views, the full chronology.

EMPHASIS

Which detail leads, which is buried, which is repeated.

EXAMPLE

"A campaign poster citing accurate statistics, but only the ones that flatter one side, paired with imagery designed to provoke fear."

DISGUISED AS JOURNALISM

Fake news.

TERM · 04

Fake

"Dressed up to look like a real outlet."

News content fabricated to look like legitimate journalism.

Imposter sites that mimic real outlets, same fonts, similar URLs, plausible bylines. Or social posts laid out to look like screenshotted headlines. The goal is to inherit the trust of journalism without doing any of the work.

IMPOSTER SITES

A near-identical clone of a real outlet, one letter different in the URL, identical masthead.

SOCIAL FAKES

Mock-ups designed to look like a screenshot of a real headline that was never published.

EXAMPLE

"A screenshot circulates of a 'BBC News' headline, pixel-perfect typography, plausible date, that the BBC never published."

PHOTOGRAPH THIS SLIDE

The four at a glance.

Same family. Different intent. Different signals to look for.

01
Mis

Misinformation

False or misleading content shared without intent to deceive. The sharer believes it.

02
Dis

Disinformation

False or misleading content shared deliberately, knowing it's false. The sharer wants spread.

03
Pro

Propaganda

Content used to promote a cause. Not always false, selective, emphasised, emotionally loaded.

04
Fake

Fake news

Content disguised as journalism, imposter sites, mock screenshots, fabricated bylines.

THE SPLIT THAT MATTERS MOST

Mis = mistaken. Dis = deliberate. Propaganda = persuasive. Fake = costumed.

Why it spreads.

It isn't because people are stupid. It's because misleading content is engineered to fit how human attention actually works.

TRIGGER 01

It hits an emotion, fear, anger, outrage.

Calm, accurate corrections don't go viral. Things that make you feel something do.

TRIGGER 02

Sharing signals belonging.

Passing it on tells your circle which side you're on. The content matters less than the signal.

TRIGGER 03

It moves faster than verification.

A correction takes hours. A reshare takes a second. By the time the truth arrives, the lie has been seen ten times.

TRIGGER 04

Sharing makes you look informed.

People share things that feel true, especially when the share itself flatters them.

And the platforms amplify all of this, by design, because engagement is what they're built to maximise. We'll come back to this in Section Three.

THIS ISN'T ABSTRACT. THE COST IS REAL.

Real impact, close to home.

Three short cases. Each is the shape of a story we've all already seen. The headlines below ran. The outcomes below them happened.

MORNING POST · POLITICS DESK

RETRACTED

"Early exit polls reveal landslide, final count expected by midnight"

POSTED 14:22 · 2 HOURS BEFORE POLLS CLOSED

Election: fabricated results circulate hours before the vote closes.

A coordinated push shifts turnout in marginal constituencies. By the time the platform takes action, the count is over.

HEALTH UPDATE DAILY · WELLNESS

FALSE

"Common household item shown to neutralise virus, doctors confirm"

SOURCE: FORWARDED FROM A PRIVATE GROUP · NO AUTHOR NAMED

Public health: false "cure" goes viral during a real outbreak.

People take a substance they shouldn't. Hospitals admit avoidable cases. The originator never identified.

LOCAL NEIGHBOURHOOD WATCH · GROUP POST

WRONG PERSON

"Sharing widely: local resident pictured below identified as suspect"

SHARED 4,200 TIMES IN 6 HOURS · 312 COMMENTS

Community: a rumour targets named individuals, with consequences offline.

A neighbourhood post identifies the wrong person. Threats follow. Damage difficult to undo.

• THE POINT Not "social media is bad". The point is that the cost is paid by people, not platforms.

OVER TO YOU

Where have you noticed any of these in the last week?

DISCUSSION
TIMER
05:00

START

RESET

PROMPT

Think about your feed yesterday. Did you see anything that fit one of the four terms?

Don't worry about being precise. Talk in pairs. One example each. Whichever term feels closest.

HELPFUL PROMPTS

- A post that made you feel something *fast*, was it earning that reaction?
- A "screenshot" of a headline, did you check the outlet?
- Something a relative forwarded that you weren't sure about.
- No need to name names. The pattern is what we're after, not the people.

02

How media works.

Where information comes from changes how it reaches you, who paid for it to reach you, and what it's most likely to leave out.

SLIDES IN THIS SECTION

17 → 20

Three types of media.

A quick visual breakdown. Most people use all three on the same day.

Traditional

TYPE · 01

Print · Radio · Broadcast TV

Newspapers, magazines, evening news, talk radio.
Edited by a named newsroom. Slow, scheduled,
finite. You receive it. You don't shape it.

Digital

TYPE · 02

News sites · Blogs · Podcasts

Online versions of outlets, independent sites,
newsletters, podcasts. Editorial still applies but
cycles are faster, headlines are A/B tested,
comments live underneath. You can search. You
can comment.

Social

TYPE · 03

Feeds · Reels · Group chats

Posts from anyone, ordered by an algorithm,
optimised for engagement. The line between
"audience" and "publisher" disappears. You receive
it. You shape it. You are it.

NOTICE

As you move left → right, speed goes up, gatekeeping goes down, and your role shifts from audience to participant.

Three lenses for comparing them.

Use these three questions on any source. They determine how reliable the information that reaches you is likely to be.

01

Production & editorial process.

Who decides what gets published? Is there a named editor, a correction process, a code of standards, or is anyone with an account a publisher?

Ask: "Who would I complain to if this was wrong?"

02

Reach & speed.

How fast can it spread, and to how many people? Print is slow. Broadcast is wide but scheduled. Social is instant and unbounded, and a single post can reach more people than a national newspaper.

Ask: "How much time was there to fact-check this?"

03

Funding & incentives.

Who pays, subscribers, advertisers, a state, an algorithm rewarding engagement? Whoever pays shapes what gets made and how it's framed.

Ask: "Who profits if I share this?"

PRERECORDED COMPARISON

Same story, three formats.

A single news story, say a public protest, shown across all three media types. Notice what changes.

01 · TRADITIONAL Newspaper	"Thousands gather peacefully; police report no incidents."	700-word article · named reporter · printed next morning · editorial sign-off · corrections column
02 · DIGITAL News site	"LIVE: Thousands gather, what we know so far (updated 14:22)"	Live blog · updated every few minutes · headline A/B tested · comments below · ads in-stream
03 · SOCIAL Voice note	FORWARDED TO FAMILY GROUP · 4 MIN AGO 0:24forwarded many times	0:47 voice note, forwarded onward. No source. Cannot be quoted, fact-checked, or searched. Spreads through trusted contacts, ordered by who sent it last. Context optional.

Same event. Same hour. The version that travels furthest is usually the one with the fewest words and the strongest emotion.

No medium is automatically trustworthy.

Each format has things it does well and predictable ways it fails. The skill is recognising the failure modes of the platforms *you* use most.

	Traditional	Digital	Social
STRENGTHS	Editorial chain · slower pace · named accountability · corrections process	Searchable · linkable · multimedia · live updates · large archives	Speed · reach · direct voice · no gatekeepers · diverse voices on the ground
TYPICAL FAILURES	Slow to react · narrow viewpoint · paywalled · misses local stories · house bias	Clickbait headlines · A/B-tested framing · comment-section drift · paywall vs ad model tension	Algorithmic amplification of outrage · imposters · context collapse · coordinated campaigns
QUESTION TO ASK	"Whose worldview shaped the editorial line here?"	"Is the headline doing more work than the article?"	"Why is the algorithm showing me this, today?"

WORKING PRINCIPLE No single source is enough. Cross-check before you trust, especially when the post made you feel something fast.

03

How your feed is built.

You don't see "the internet". You see a custom version of it, chosen for you, optimised for something. Once you can name the mechanism, you can read it.

SLIDES IN THIS SECTION

22 → 26

MECHANISM 01

Algorithms.

The system that decides which content appears in your feed, and in what order. Built to maximise engagement, not accuracy, not importance, not wellbeing.

A USEFUL REFRAME

An algorithm is not "what's popular today". It's what's most likely to keep you here. That distinction matters.

A USEFUL TEST

If a post makes you angry on cue, ask: *why did the system pick this one for me, right now?*

MECHANISM 02

Filter bubbles.

The personalised information environment you end up inside. The more you engage with something, the more the system shows you similar content, until that *is* what the world looks like to you.

HOW IT FORMS

Every "like", every long pause on a video, every click on one side of an argument is a vote for "show me more of that". The system listens.

WHY IT'S A PROBLEM

Not because one viewpoint is wrong, but because you stop noticing that another viewpoint exists at all. The disagreement disappears, and so does the practice of weighing it.

A COUNTER-MOVE

Once a week: read one piece on a topic you care about from a source you wouldn't usually read.

MECHANISM 03

Echo chambers.

Online communities where similar views are repeated and reinforced, and contrasting views get filtered out, or pushed back against, hard, until they stop turning up.

INSIDE THE CHAMBER

"Exactly this."	"Couldn't agree more."	"This is what I've been saying."
"Spot on."	"Finally someone said it."	" <u>100</u> <u>100</u> <u>100</u> "
"I think there's another side..."	"Preach."	"Have you considered..."

Dissenting voices either get drowned out, ratio'd, or quietly leave. What sounds like "everyone agrees" is the chamber filtering, not the world.

FILTER BUBBLE VS ECHO CHAMBER

A filter bubble is what the algorithm shows you. An echo chamber is what your community amplifies. Both reinforce each other.

WHY "ECHO"

The same idea bounces back, slightly louder each time. People mistake the volume for evidence, "everyone thinks this", when really the same people are speaking.

TELL-TALE

When was the last time you saw a thoughtful disagreement on this topic, in this space?

Same topic, different feeds.

Two users search the same term, the same minute. What they see is not the same.

Town Hall Reporter

5h · for you

"How three local services will change under the new council. A field walkaround."

1.6K REPOSTS 240 COMMENTS

Why this matters.

Coordinated influence campaigns and propaganda thrive in feeds that are optimised for engagement. Recognising the mechanism is the first step in recognising the manipulation.

THE COMPOUND EFFECT

Algorithm + filter bubble + echo chamber + emotion-targeting content = an environment where coordinated deception is structurally favoured over careful reporting.

WORTH HOLDING IN MIND

Most of what reaches you is not malicious. But the few coordinated pushes that *are* malicious are extraordinarily well-suited to this terrain.

COMING UP · MODULE 2

Reading critically & investigative thinking.

In Day 2 we'll go past "spotting" misleading content into reading it apart, bias, persuasion tactics, manipulation patterns, and the cognitive habits that make you harder to fool.

CRITICAL THINKING

SOURCE-OF-SOURCE

EMOTIONAL REGULATION

PERSUASION PATTERNS

04

Your rights online.

You are not a passive user. You have rights, you have habits that protect them, and a few small changes this week will do more than any setting screen ever has.

SLIDES IN THIS SECTION

28 → 32

NOT A LIST OF RULES

What is digital citizenship?

QUESTION TO SIT WITH

What do you want the online spaces you use to feel like, and what part do you play in shaping that?

Digital citizenship isn't a code of conduct. It's the recognition that your behaviour online makes those spaces better or worse for everyone around you.

CITIZENS, NOT USERS

"User" frames you as someone the platform serves. "Citizen" reminds you the platform is partly a public space you co-create.

RIGHTS + RESPONSIBILITIES

You have rights worth defending, and your behaviour either respects or violates other people's.

TODAY'S FOCUS

The rights side: what you're owed, how to spot when a platform isn't honouring it, and what to do about it.

Your digital rights.

Not exhaustive. The four to know first.

RIGHT · 01

Privacy & protection of personal data.

What you share, who can see it, and what a platform can do with it should be your choice, not a default you missed.

HOLDS WHETHER YOU'RE 13 OR 73.

RIGHT · 02

Access to information & freedom of expression.

You can read, share and speak, within limits that protect others, without arbitrary suppression of legitimate speech.

COMES WITH RESPONSIBILITIES.

RIGHT · 03

Safety from harassment.

Threats, doxxing, targeted abuse, you have the right to use a platform without being subjected to these, and a way to report it.

PATCHY IN PRACTICE. WORTH PUSHING ON.

RIGHT · 04

The right to be forgotten.

In many jurisdictions you can request that data about you be deleted, and that old material no longer follow you indefinitely.

BEST PROTECTED WHERE DATA LAWS ARE STRONG.

A right is only as live as your awareness of it. Knowing it exists is the first half of using it.

Respected vs violated.

For each right, what does it look like when a platform honours it, and when it doesn't?
Noticing the difference is the first step.

RIGHT · 01 · PRIVACY

Privacy & data protection.

RESPECTED

Clear, plain-language settings. Defaults that protect you. A real path to download or delete your data.

VIOLATED

Defaults to "share publicly". Settings buried. Data sold without meaningful consent.

RIGHT · 02 · EXPRESSION

Freedom of expression & access to information.

RESPECTED

Published rules, transparent enforcement, real appeal for take-downs, no arbitrary throttling.

VIOLATED

Opaque "shadow-bans". No reasons given. Different rules for different accounts. No appeal.

RIGHT · 03 · SAFETY

Safety from harassment.

RESPECTED

Working report flows, fast review of serious threats, blocking that actually blocks, support for targets.

VIOLATED

"No violation found." Threats left up. Targets told to leave. Pile-ons monetised via engagement.

RIGHT · 04 · TO BE FORGOTTEN

Right to be forgotten.

RESPECTED

Honoured deletion requests for legitimate cases. Old material removable. Backups handled too.

VIOLATED

"Deleted" content still searchable. No mechanism for legitimate erasure. Old data resurfaced for ads.

HABITS THAT PROTECT YOU

Digital hygiene basics.

0 / 5 reviewed

☐

Strong passwords + a password manager.

One per site. Long. Not reused. Let a manager remember them so you don't have to.

☐

Two-factor authentication on every important account.

Email, bank, main social. Authenticator app preferred over SMS where offered.

☐

Recognise & resist phishing.

Urgency + a link + a request for credentials = stop and verify out-of-band.

☐

Review privacy settings on the platforms you actually use.

Once a year. 10 minutes per app. Pay attention to defaults.

☐

Know what to do if an account is compromised.

Change password from a clean device · revoke sessions · enable 2FA if not already · check connected apps · alert anyone the account messaged.

PROGRAMME AIM · 03

The easiest thing to pass on.

Of everything in this whole programme, digital hygiene habits are the simplest to share with friends and family this week. No vocabulary, no platforms-discussion, just five small actions that protect them now.

TAKE-HOME · CHECKLIST

FOR SOMEONE YOU LOVE

Five habits. One conversation. This week.

- 1. Strong, unique passwords, set up a password manager together.
- 2. Turn on 2-factor authentication on email + main social.
- 3. Show them what a phishing message looks like.
- 4. Walk through privacy settings on one app they use daily.
- 5. Agree on what they'll do if an account is hijacked, before it happens.

COPY THESE FIVE DOWN BEFORE YOU LEAVE

WHY THIS

Most people in your life will never sit through a media-literacy workshop. They will sit through a ten-minute conversation with you.

A SMALL ASK

Before Day 2, have this conversation with one person. Any of the five. Just one.

05

Spot the fake.

Three articles. Two real, one fabricated. Five minutes in small groups to work out which is which, and, more importantly, *why*.

SLIDES IN THIS SECTION

34 → 39

SMALL GROUPS · 5 MINUTES

How it works.

ACTIVITY TIMER

START

RESET

05:00

THE FORMAT

1. Read three news articles, side by side.
2. Two are real. One is fabricated.
3. In groups of three or four, decide which is the fake.
4. Crucially: note *why*, what tipped you off, or what raised doubt.
5. Each group reports back. We'll do the reveal together.

USEFUL LENSES WHILE READING

Source, what's the outlet? Have you heard of it? Is the URL exactly right?

Byline & date, named reporter? Recent date? Specific or vague location?

Tone, does the language sound like reporting, or like persuasion?

Detail, specifics that could be checked, or claims that can't be?

TWO REAL · ONE FAKE

Read all three. Decide which is fabricated.

Two are real and verifiable. One isn't. Five minutes in your group.

AL JAZEERA · ELECTIONS

PUBLISHED 28 FEB 2023 · UPDATED 1 MAR 2023

Nigeria presidential election results 2023 by the numbers

The Independent National Electoral Commission declared Bola Tinubu of the All Progressive Congress the victor. He garnered 8,794,726 votes, while his closest competitor, Atiku Abubakar of the People's Democratic Party, received 6,984,520 votes.

Nearly 90 million people were eligible to vote. Elections occurred nationwide on 25 February, with extended voting into Sunday in select areas. Tinubu, a two-term Lagos governor, selected Kashim Shettima, former Borno governor, as his running mate...

C

EACH GROUP · 60 SECONDS

Which one, and how did you know?

SHARE-BACK

06:00

START

RESET

EACH GROUP SAYS

"We picked [A / B / C], because..."

One signal per group. Don't repeat what's already been said, name a different one.

LISTEN FOR

- Anyone who picked the fake for the *wrong* reason, interesting!
- Anyone who's still uncertain, say so.
- Reasons no-one in the room has mentioned yet.
- Patterns that show up across multiple groups.

Facilitator: write each reason on the board as it comes up. We'll use the list on the next two slides.

ARTICLE B IS THE FAKE.

What gave it away.

Same article, annotated. Six signals, all visible on the page, before any external fact-checking.

GLOBAL HEALTH BULLETIN

INTERNATIONAL · 3 DAYS AGO

Internal WHO memo confirms vaccine effectiveness against new variant "far lower than publicly stated", sources say

A document said to be circulating among senior staff at the agency suggests officials have been aware for weeks that a new strain reduces vaccine response by up to 71%, but have chosen not to make the finding public.

The memo has not been authenticated and was not provided in full. It was described to this outlet by "a person familiar with its contents". The 71% figure does not appear in any of the three peer-reviewed studies on the variant published this year. Shared 38,000 times in 18 hours...

By staff · globalhealthbulletin.co

FAKE

- SIX SIGNALS
- 01

Lookalike outlet. "Global Health Bulletin" sounds authoritative, but it's not WHO, CIDRAP, or any recognised public-health body. Mimics legitimacy.
- 02

Suspicious domain. ".co" instead of an established health-body domain (who.int, cdc.gov). Common with cloned or look-alike health sites.
- 03

Generic byline. "By staff", no named health correspondent, no editor, nobody to hold accountable for the claim.
- 04

Sourcing two steps removed. A memo "said to be circulating", "described to this outlet by a person familiar". The document has "not been authenticated and was not provided in full". Nothing checkable.
- 05

A precise number with no method. "71%" sounds rigorous, but no study, sample size, methodology, or DOI is cited. Numbers without sources do persuasion, not science.
- 06

The article quietly disproves itself. Admits the figure "does not appear in any of the three peer-reviewed studies". Cites virality ("38,000 shares in 18 hours") in place of evidence.

What you were already noticing.

The reasons each group gave back. Named, written down, this is your starting toolkit for Modules 2 and 3.

CUE 01

"The headline was screaming."

All-caps, exclamatory, emotionally extreme.
Real reporting rarely shouts.

CUE 02

"I didn't recognise the outlet."

Or the name was almost right, but a letter off.

CUE 03

"There was no real name on it."

"Staff Writer", "Editorial Team", nobody to call.

CUE 04

"Nothing was actually checkable."

No names, no document, no date, no department.

CUE 05

"It told me what to feel."

Outrage, fear, urgency, pre-packaged in the deck.

CUE 06

"The URL looked off."

Unusual TLD, hyphens, suffixes like "-news" or "-today".

CUE 07

"It contradicted itself."

The body undid the headline's claim, quietly.

CUE 08

"It just *felt* off."

Trust the gut. Then check why.

IN YOUR NOTES

Write down the two cues you found yourself relying on most. Bring them tomorrow.

WHEN YOU SEE IT

What you can do, today.

Three actions. Each is something you can do the moment you spot something misleading. None require expertise.

01

Report it where you found it.

The pattern is the same on every platform. Open the post's menu, choose Report, then pick the most specific category, "false information", "scam", "impersonation", not just "I don't like this".

WHERE TO FIND REPORT

X / Twitter tap ... on the post › Report post
 Instagram tap ... on the post › Report
 TikTok press and hold the video › Report
 Facebook tap ... on the post › Find support or report
 WhatsApp press and hold the message › Report

02

Don't share it on, even to dunk on it.

The algorithm doesn't distinguish between agreement and mockery. A reshare with "lol look at this nonsense" still counts as engagement, still gets amplified.

If you want to comment: screenshot, don't quote-share. The reach belongs to you, not the original post.

03

Talk to the person who shared it.

Where it feels safe to. In private, not in the comments. Lead with curiosity ("Where did this come from?"), not correction.

Most people who share misinformation aren't bad, they're rushed. A quiet "hey" matters more than a public correction.

06

Closing Day 1.

Two quick reflections. A look at what's coming tomorrow. And one thing to take home.

SLIDES IN THIS SECTION

41 → 43

BEFORE WE CLOSE

Two quick reflections.

QUIET TIME

03:00

START

RESET

REFLECTION · 01

One thing from today you'll share with someone outside this room before Day 2.

Whatever felt most useful, most surprising, or most worth passing on. One conversation. Doesn't have to be long.

REFLECTION · 02

One thing you want to look into yourself.

A question that's still sitting with you. A platform you want to look at again. A right you didn't know you had.

Write both down. We'll start tomorrow by picking a couple up.

WHAT'S NEXT

Day 2, Reading Critically & Investigative Thinking.

DAY 02 · PREVIEW

Today you learned to recognise it. Tomorrow you learn to read it apart.

We'll move past spotting misleading content and into reading the structure of it, the persuasion tactics, the framing tricks, the cognitive shortcuts that make it land.

TOPIC · 01

Critical & analytical thinking

TOPIC · 02

Tricks used to mislead

TOPIC · 03

Attention & emotional control

TOPIC · 04

Comparing sources side by side

BRING WITH YOU

- Your two cues from slide 39.
- One example of misleading content you saw between sessions.
- Whatever your "look into" reflection turned up.

HEADS UP

Day 2 is hands-on. We'll *write* fake news together, and find out how easy it is. That alone changes how you read it afterwards.

THANK YOU

See you tomorrow.

You came in able to feel when something was off. You leave with the vocabulary to name it, the map to locate it, and a first set of habits to act on it. That's not a small day.

01

Name what you see.

Mis · Dis · Propaganda · Fake, and the difference matters.

02

Read the mechanism.

Algorithm · filter bubble · echo chamber, built into the feed.

03

Pass one habit on.

One conversation about digital hygiene this week.
One person. That's the ask.
