

DAY TWO · 11:30 AM – 1:00 PM · 90 MINUTES

Social Media Warfare

Navigating influence, information and digital threats, holding the terrain without losing the plot.

PREPARED FOR

Senior Communicators & Leaders

Public Relations Officers · Spokespeople · Institutional Leadership

PROGRAMME

STRATCOMMS

Advanced Strategic Communications for Leadership, Operational Excellence & Resilience

YOUR FACILITATOR

Abdulkerimu Oare

Leadership Strategy Consultant · Priori Orators

Abdulkerimu makes strategic communication simple, stripping away jargon and blending structured frameworks with live simulations, so participants build instincts they can use when it matters most.

It is terrain you hold.”**

WHERE THIS SESSION SITS

DAY ONE

Strategic messaging: the Message House · Media engagement · Crisis communications

DAY TWO · THIS MORNING

Cross-cultural communication with Fatimah: the human terrain your messages travel through

NOW · THE STRESS TEST

Everything Day 1 built: tested in public, at speed, against adversaries. After lunch, Yemi takes the ethics of the fight.

A NIGERIAN COMPOSITE · TIMINGS FAITHFUL

The lie finished its journey before the truth cleared approval.

19:14

An anonymous account posts: officers of a federal institution **“beat a woman to death”** at a checkpoint. No name, no location, one blurry photo.

19:50

The claim is reborn as a WhatsApp broadcast: new caption, more certainty. **“Forwarded many times.”**

21:03

A hashtag is trending #1 in Nigeria. Influencers demand answers. The institution's last post, **a courtesy visit**, fills with fury.

06:30

National blogs publish overnight. Morning radio leads with it. The story is now **“widely reported”**, by outlets quoting each other.

21:20 +1

The official statement lands, **26 hours after the first post**. Measured, accurate, cleared by everyone.

WHAT THE CORRECTION ACHIEVED

The incident never happened. It did not matter.

No woman. No checkpoint incident. The photo was from another country, three years old. The statement reached **a fraction of the**

The institution did nothing wrong that night, except arrive twenty-six hours late to its own story.

CLICK EACH QUADRANT

Terrain, not a channel.

A channel is something you switch on when you have news. Terrain is where you live. Nobody opts out of terrain. You hold it, or you lose it.

01 · PRESENCE

You are on it whether you post or not

Your institution is discussed, mocked, defended and impersonated online every day. Absence does not remove you from the terrain. It only removes your voice from it.

02 · ACTORS

It has actors, not audiences

An audience listens. Actors move. They amplify, distort, hijack and defend. Some are paid, most are sincere, and your response has to tell them apart.

03 · TEMPO

Speed is a weapon

On this terrain, the first credible account of an event becomes the event. Whoever owns the first hour usually owns the story: 26 hours is a surrender.

04 · OBJECTIVE

Trust is the ground being fought over

Disinformation rarely aims at one message. It aims at your right to be believed at all, so trust is what you fortify in peacetime and defend under fire.

QUESTION

The last false story about your institution: where did it reach you first?

Not the worst one. The last one. Tap one: results update live.

ANONYMOUS

RESET POLL

- A

A WhatsApp group: family, alumni, community

0%
- B

X (Twitter): a trending post or hashtag

0%
- C

Facebook: a page or a viral share

0%
- D

TikTok or Instagram: a video already everywhere

0%
- E

A journalist's call: the press knew before I did

0%

The feed is an auction. Accuracy is not a bid.

WHAT THE ALGORITHM ACTUALLY REWARDS

- 01 **Emotion:** outrage and fear outperform accuracy on every engagement metric.
- 02 **Speed:** the first version of a story earns the reach; corrections inherit the leftovers.
- 03 **Conflict:** a fight retains attention; a clarification releases it. The feed prefers the fight.
- 04 **Novelty:** falsehood is, by construction, newer than the truth. That is its structural advantage.

6× THE SPEED PROBLEM

False news reaches 1,500 people about **six times faster** than true news: spread by people, not bots (MIT, 126,000 story cascades). Your correction races a six-length head start.

THE WHATSAPP LOOP. NIGERIA'S FRONT LINE

Closed groups. No public metrics, no community notes, no reply column where truth can fight back. Credibility is borrowed from the **sender, not the source**: it came from your uncle, so it must be true.

THE TRUST DEFICIT

Institutional voices start behind. Years of “no comment” mean an official denial can **confirm** a rumour for some audiences. That deficit is repaid in peacetime, never during the crisis.

The algorithm is not against you. It is indifferent, and on this terrain, indifference is worse.

CLICK EACH CARD TO REVEAL

Three different weapons. Three different responses.

01 · FALSE & SINCERE

Mis-information

False content shared by people who believe it: the uncle forwarding the fuel-scarcity voice note “to protect the family”. The sharer is your audience, not your enemy. **Response: educate.**

02 · FALSE & ENGINEERED

Dis-information

False content built to deceive: fabricated memos on institutional letterhead, staged “eyewitness” accounts, paid amplification. This is a campaign with a budget. **Response: expose.**

03 · TRUE & WEAPONISED

Mal-information

True content deployed to wound: a real internal memo leaked mid-negotiation, a genuine photo stripped of its context, a private detail made public. You cannot deny it. **Response: contextualise.**

Wrong diagnosis, wrong medicine: exposing a sincere uncle recruits his whole group for the other side.

CLICK EACH TILE TO REVEAL

When your mentions catch fire, it is never one enemy.

Five actors, five motives, and the largest group
are not enemies at all.

Trolls

A1

Provocation as sport. They want your official account angry on the record. Deny them the screenshot, never reply in kind.

Bot Networks

A2

Scale on demand: thousands of accounts manufacturing the impression of consensus. Volume is their tell, and their weakness: they persuade no one who looks closely.

Influence Operations

A3

Funded, targeted, patient. They farm credibility for months before they spend it. The professionals, and the reason this session exists.

Sincere Amplifiers

A4

Wrong but honest: the biggest group by far. They are your audience carrying someone else's ammunition. Treat them as the enemy and you recruit for the enemy.

Outrage Media

A5

Blogs and pages monetising anger: headline first, correction never. They follow heat, not sides: starve the heat and they leave.

PART TWO OF FOUR

Threats

What you are defending against: engineered outrage, synthetic media, your own people's accounts, and the full operation. Then we test your eye.

Organic anger is a message. Engineered outrage is an operation.

Six signals separate them: every one visible from your desk, with no special tools.

	Organic anger	Engineered outrage
ACCOUNTS	Years old, messy histories: football, family, politics, jokes.	Weeks old, batch-created, serial handles, borrowed profile photos.
TIMING	Builds over hours, follows the event it reacts to.	Spikes in minutes, sometimes <i>before</i> the “trigger” is public.
LANGUAGE	Varied voices, local idiom, pidgin, typos, contradictions.	Identical phrasing across accounts: copy-paste with the same typo.
HASHTAGS	Adopts whatever tag the crowd converged on.	Hijacks <i>yours</i> : floods your campaign tag so your channel delivers their message.
TARGET	The issue: the incident, the policy, the price.	The institution itself, and anyone who defends it.
AFTER THE PEAK	Fades as facts land and life moves on.	Pivots to the next narrative on schedule, same accounts, new cause.

Answer the first. Expose the second. Confusing them is the most expensive mistake in this domain.

You will not out-stare a deepfake. You out-process it.

CAPABILITY · TODAY, NOT SOMEDAY

30 seconds of audio clones a voice

Free tools produce a leader's voice "ordering" anything: good enough for a phone speaker in a WhatsApp group, which is where it will be heard. Video passes at feed-scroll speed.

DETECTION · A LOSING RACE, RUN DIFFERENTLY

Provenance beats pixels

Artefacts (lip-sync drift, studio-perfect silence, warped hands) catch cheap fakes only. The durable questions: **who posted it first, when, and can anyone show where it has been since it was recorded?** A one-day-old account is a louder tell than any pixel.

PRE-EMPTION · DECIDED IN PEACETIME

Make fakes break your pattern

Publish the list of channels you actually announce on. Archive genuine footage of your leaders. Agree a **callback protocol**: any voice instruction arriving outside the agreed channel is verified on the agreed channel. Every time, whoever's voice it is.

The deepfake's real target is not one message. It is the day your genuine footage gets dismissed as fake. Defend that day now.

Your official account has a firewall. Your personal account has your ego.

FOUR OPENINGS THE ADVERSARY USES

- 01 **The public org chart:** LinkedIn plus Facebook rebuilds your structure, postings and reporting lines in an afternoon.
- 02 **The location-tagged photo:** a phone photo quietly records exactly where it was taken; the background shows your layout.
- 03 **The friendly stranger:** the recruiter, the admirer, the "journalist". Six weeks of small talk before the first question that matters.
- 04 **The reused password:** one breached shopping site, and a personal breach becomes an institutional breach.

THE RULE

Your personal account is an **official attack surface**. The adversary does not distinguish between your two profiles, so from today, neither do you.

THE FAMILY DIMENSION

Your spouse's check-ins and your children's school posts map your movements as precisely as yours do. The household is the perimeter: brief it like one.

THE QUIET FAILURE

Most security losses are not leaks. They are **accumulations**: a hundred innocent posts assembled by a patient analyst into one useful picture.

Nobody posts the secret. Everybody posts the pieces.

ONE OPERATION, DISSECTED

The operation was weeks old before its “trigger” ever happened.

THE SURFACE STORY

A checkpoint arrest video “proves” an institution is targeting one community.

The arrest was real and lawful: body-camera footage existed. Within two hours the clip was trending with a communal framing, the institution's own commitment back to users flooded with it, and two influencers posted near-identical three-and-a-half-minute edits. What

PHASE 1 · PREPARATION

Weeks before. Accounts batch-created and aged. Community groups joined. Credibility farmed with football banter and job adverts.

PHASE 2 · TRIGGER

A real, ambiguous event. Operations prefer real triggers: the facts are checkable, the framing is not.

PHASE 3 · AMPLIFICATION

The spend. Bot spike inside 40 minutes, the institution's own hashtag hijacked, paid influencers on schedule.

PHASE 4 · CAPTURE

Mainstream pickup. Blogs cite the trend as evidence; radio cites the blogs. The narrative hardens into “what everyone knows”.

The tells were all visible in Phase 1: account age, synchronised phrasing, and a hashtag that pivots. Monitoring exists to catch operations *before* they spend.

WHOLE ROOM · 5 MINUTES · VERDICT FIRST, THEN FLIP

Real or fake?

A voice note reaches you this morning, already spreading on WhatsApp. Take a verdict before the reveal, because the tell is never how real it sounds.

ACTIVITY TIMER

05:00

START

RESET

VOICE NOTE · WHATSAPP

“LEAKED: the sector commander orders live fire on the Unity Junction crowd.”

REAL OR FAKE? CLICK FOR THE VERDICT

FAKE · VOICE CLONE

Studio-clean silence behind a “field” order. First posted by a day-old account, with no chain of custody. The tell was provenance, not the voice. Today, a voice alone proves nothing.

PART THREE OF FOUR

Defence

The counter-moves: a decision tree for every threat, the first hour, corrections that work, and monitoring that costs nothing.

CLICK EACH TILE TO REVEAL · THIS TREE RUNS THE SIMULATION
DEBRIEF

Five postures. Only five.

The common error is not the wrong response. It is
the right response at the wrong tier.

Ignore

R1

When: fringe account, no traction, engaging = amplifying. A decision with a name and a review time, not an absence of one. Log it, set a check-back, move on.

Monitor

R2

When: rising but unverified. Set tripwires: resharing speed, pickup by verified accounts, press calls, spillover into the streets. Cross one, move tiers. Prepare the correction while you wait.

Correct

R3

When: spreading, false, and yours to answer. Truth sandwich, own channels, trusted messengers. Correct the record, never duel the account that posted it.

Pre-bunk

R4

When: the attack is predictable but has not landed: an operation, an anniversary, a court date. Inoculate the audience against the technique before the content arrives.

Escalate

R5

When: unlawful content, threats, fake audio or video of leaders, or coordinated operations. Evidence pack → platforms, legal, command: in parallel with the public response, never instead of it.

You do not need the full story to speak. You need three true sentences.

ANATOMY OF THE HOLDING STATEMENT

- 01 **We are aware:** name the claim's existence, not its content.
"We are aware of reports circulating about..."
- 02 **Here is what we are doing:** the verifiable action underway.
"We are establishing the facts with the unit concerned."
- 03 **Here is when you will hear from us:** a named time. "We will update the public by 16:00 today." Then keep it.
- × **Never:** speculation, blame, denial of what you have not verified, or "no comment", which the feed translates as "guilty".

SPEED VS ACCURACY: A FALSE CHOICE

You are not choosing between fast and accurate. You are choosing between **what is true now** and everything eventually. Say the first. Promise the second.

OWN THE FIRST HOUR

Silence is a vacuum, and the terrain abhors one. It fills with speculation within minutes. Pre-approved holding templates turn a 4-hour clearance into a 15-minute one.

DAY 1 CALLBACK · THE MESSAGE HOUSE

Your roof message is the spine of every holding statement: values first, action second, timeline third. You built it on Day 1: the simulation will make you use it.

Two clocks: inoculate before, correct without amplifying after.

BEFORE THE ATTACK · PRE-BUNKING

Warn about the technique, not the content: “expect fake casualty figures within hours of any incident” beats rebutting each figure later. Before the 2022 invasion of Ukraine, Western governments published the false stories the attacker was preparing. When those stories appeared, they were already dead.

Small dose plus refutation: inoculation works like a vaccine. Show a weakened example of the lie and take it apart in public.

Publish your pattern: “here is how we announce, and where.” Ukraine's president posted simple nightly phone videos from the same streets; when a fake surrender video came, it broke the pattern and failed in hours.

AFTER THE ATTACK · CORRECTION THAT WORKS

The truth sandwich: fact, brief flag of the falsehood, fact again. Wrong: “NO, we did NOT kill anyone!” Right: “All persons at the checkpoint are safe and accounted for. A false claim is circulating. Footage of the full encounter follows.”

Avoid the repetition trap: never headline the lie. Repetition is how lies become furniture; even your denial rehearses it.

Choose the messenger first: community leaders, veterans, respected local voices. A correction nobody trusts is a second exposure to the lie.

You cannot respond to what you did not see.

Monitoring is sentry duty for the information space, and it costs discipline, not money.

WORKING WITH PLATFORMS: THE ESCALATION PATH

- 01 **Document before you report:** screenshots with timestamps, URLs, archive copies. Content vanishes; your evidence must not.
- 02 **In-app reporting is triage:** impersonation and synthetic media claims move fastest; “false information” moves slowest.
- 03 **Verified status unlocks priority channels:** government and institution programmes exist on every major platform. Enrol in peacetime.
- 04 **Threats and unlawful content go wider:** law-enforcement cybercrime channels in parallel, with the same evidence pack.

THE DAILY BATTLE RHYTHM, NO

08:00 · 13:00 · 20:00: ten minutes each. Saved searches for your institution's name and its misspellings; alerts on your leaders' names; lists of the journalists and influencers who move your stories.

LISTENING POSTS

Wherever today's poll pointed, the fires that matter start unseen: closed WhatsApp groups. Trusted staff who are already members become your early-warning net, reporting **in**, never broadcasting out.

ONE LOG LINE PER CLAIM

WHAT · WHERE · HOW FAST · DECISION: a claim, its platform, how fast it is moving, and the tier you chose. The log is what turns the decision tree from a poster into a practice.

PART FOUR OF FOUR

Offence, legitimately.

The strongest position is built before anyone attacks,
because the best time to earn trust is when you do not need it.

You cannot open the account during the withdrawal.

THE CREDIBILITY BANK

Every helpful, human, truthful post is a **deposit**. A crisis is a **withdrawal**. If the first time citizens hear from you is the day of the allegation, you arrive as a stranger asking for credit.

THE HUMANISED VOICE

People follow people. Show faces, name authors, answer replies, admit small imperfections. An account that only issues communiqués is a noticeboard, and nobody defends a noticeboard.

ADVOCATES, WITH GUARDRAILS

Staff, veterans and community voices are messengers people already trust. Empower them with clear rails: share the public, never the operational; disclose the affiliation; when in doubt, ask first.

WHAT GOOD LOOKS LIKE

NCDC · NIGERIA

Through COVID-19: plain language, a daily rhythm, and the courage to say “we do not know yet”. The deposit paid out every time a rumour hit.

NEW ZEALAND POLICE · GLOBAL

Humour and humanity from a uniformed institution: millions follow it voluntarily. When it speaks seriously, the contrast commands attention.

UKRAINE MOD · UNDER FIRE

Fast, and fluent in the internet's own language, in an active information war: an institution holding terrain against a state-sized adversary.

One deposit this week that is not a press release. That is the assignment hiding in this slide.

One hijacked account undoes five years of deposits.

This slide is doctrine, not advice. Every line is a standing order for both columns.

OFFICIAL ACCOUNTS

Two-step login from an app, never by SMS: criminals hijack phone numbers to steal text-message codes; an authenticator app defeats them.

Password manager, named holders: no shared passwords in a WhatsApp chat; every login attributable to a person.

Same-day offboarding: when someone leaves the team, access dies that day. Not month-end.

Verification & recovery, in peacetime: verified badge, current recovery contacts, platform escalation contacts on file.

PERSONAL ACCOUNTS: YOURS AND YOUR HOUSEHOLD'S

Posting discipline: post the event after you leave the location. No departures, arrivals, convoys, or patterns.

Clean photo data: location tags off, hidden photo data removed, backgrounds checked. A phone photo records where it was taken, to the metre.

Unique passwords and two-step login: one breached shopping site must not open your institutional life.

Assume the friendly stranger: unsolicited recruiters, admirers and "journalists" get verified before they get conversation.

Brief the household: spouses' check-ins and children's school posts map your movements too. The perimeter includes them.

TABLES · 18 MINUTES · THE SITUATION WILL NOT STAY STILL

13:41. It is happening to you.

ACTIVITY TIMER

18:00

START

RESET

THE VIRAL POST · 40,000 REPOSTS IN 90 MINUTES

“Soldiers at the Mile 3 checkpoint beat a pregnant woman this afternoon. She has died. RT before they delete.”

Posted 13:41 by an account created this month · a protest is being called for 17:00 · your phone is ringing. Your table is the communications cell.

HOW TO RUN IT

1. 12 minutes' working time: injects arrive at +5 and +10.
2. Pens down at +12; 90-second briefing per table.
3. Debrief against the decision tree.

YOUR TABLE DECIDES: IN THIS ORDER

- 1 · **Posture**: which tier of the tree, and why.
- 2 · **First public message**: built on your Day 1 Message House.
- 3 · **Channel**: where it goes out first, and why there.
- 4 · **Monitoring**: what you watch next, and your tripwires.

THE SITUATION DEVELOPS · REVEAL ON SCHEDULE

Does your posture survive contact?

INJECT 1 · AT +5 MINUTES

A “leaked” photo is circulating.

A woman on the ground, uniformed figures nearby. It is dark, undated, no location, **and none of that matters, because it is being believed.** Two verified accounts have shared it. A blogger DMs your official account: “Comment in 20 minutes or we publish without you.”

INJECT 2 · AT +10 MINUTES

A hostile influencer amplifies: 2.3M followers.

Quote-post of your silence, or of your holding statement, if you issued one: **“They are hiding her body. RT so all of Nigeria sees this before they delete it.”** Your mentions are now unusable. The protest hashtag has 12,000 posts.

DEBRIEF · AGAINST THE TREE

01 · Who verified the woman exists before drafting a rebuttal?

02 · Who spoke before choosing a posture, and what did it cost?

03 · Who said something at +2 they could not take back at +10?

04 · Who set a tripwire and named a review time? Praise them.

Three things to carry to lunch.

01

You are on it whether you post or not. You hold it, or you lose it, and you hold it in peacetime.

02

Three true sentences in the first hour beat a perfect statement at hour twenty-six.
Posture first: the tree decides whether you speak at all.

03

The credibility bank, the pre-bunk, the monitoring rhythm, the two-step logins: none of them can be improvised on the day.

THE SESSION IN POCKET FORM

Six moves when a threat lands.

From first sighting to peacetime posture. If a threat lands tomorrow morning, this list is your first fifteen minutes; the expanded decision tree is Appendix A2, behind this deck.

0 / 6 COMPLETE

☐ Verify before you answer

Is it real? Is it ours to answer? How fast is it moving? Screenshot and archive before anything else.

☐ Choose your tier: deliberately

Ignore / monitor / correct / pre-bunk / escalate. A posture with a name, a reason, and a review time.

☐ Own the first hour

Holding statement: we are aware · what we are doing · when we will speak again. Three true sentences.

☐ Correct without repeating the lie

Truth sandwich, own channels, a messenger the audience already trusts.

☐ Document, then report

Evidence pack first; platform escalation and lawful channels in parallel with the public response.

☐ Bank credibility daily

Helpful, human, truthful deposits in peacetime: with two-step logins, posting discipline and clean photo data standing.

STRATCOMMS • SESSION CLOSE

Hold the terrain.

You now know how to fight online: the ground, the threats, the counter-moves, the peacetime build. One question this session deliberately left open: *where are the lines?* That is the afternoon.

Viral crisis simulation: full facilitator script

TIMINGS · 18 MINUTES TOTAL

T+0. Read the viral post aloud once, verbatim. Start the timer. Tables begin: posture → message → channel → monitoring, in that order.

T+5. Reveal Inject 1 (the photo). Read the blogger's ultimatum aloud. Say only: "The situation has developed." Do not advise.

T+10. Reveal Inject 2 (the influencer). Say: "Your mentions are now unusable. Ninety seconds of working time left."

T+12. Pens down. Share-outs: 90 seconds per table, ruthlessly timed. Posture, message, channel, monitoring, nothing else.

T+17. Debrief against the tree (slide 16 / Appendix A2), one minute. Close on the model answer.

A STRONG MODEL ANSWER, NOT THE ONLY ONE

Posture: Monitor → Correct, with Escalate running in parallel (unverified claim of a death; checkpoint unit contacted; platform report on the fabricated photo with evidence pack). **Message at ~+15 min:** holding statement: aware of reports; medical and unit checks underway; no woman reported injured at any checkpoint as of 14:00; update by 15:30. **Channel:** X first (where the fire is), WhatsApp-formatted card to community leaders, radio brief ready. **Monitoring:** resharing speed, the influencer, the protest tag, and the photo's spread.

FACILITATOR NOTES

The classic failure is over-response: a full rebuttal at +2 to an unverified claim. It collapses at Inject 1. Do not rescue tables mid-inject; the discomfort is the lesson. Watch for a table that answers the blogger privately before posting publicly. Surface it in debrief: whoever you answer first owns your framing.

The five postures: when, act, and the trap

	When	Act	The trap
IGNORE	Fringe account, no traction, no verified pickup.	Log it. Name a review time. Move on.	"Ignore" drifting into "nobody is watching".
MONITOR	Rising but unverified; tripwires not yet crossed.	Set tripwires: resharing speed, pickup by verified accounts, press calls, spillover into the streets. Draft the correction now.	Monitoring without thresholds, watching a fire grow and calling it a strategy.
CORRECT	Spreading, false, and yours to answer.	Truth sandwich on your own channels; trusted messengers carry it into the closed loops.	Duelling the account instead of correcting the record. You become the story.
PRE-BUNK	Attack predictable, not yet landed: operations, anniversaries, court dates, elections.	Warn about the technique; weakened example plus refutation; publish your announcement pattern.	Pre-bunking content instead of technique. You end up advertising the lie.
ESCALATE	Unlawful content, threats, fake audio or video of leaders, coordinated operations.	Evidence pack → platform priority channels, lawful channels, command: in parallel with the public line.	Escalating instead of communicating: takedowns without a public voice read as cover-up.

Terms used in this session

- Misinformation:** false content shared by people who believe it; sincere but wrong.
- Malinformation:** genuine content deployed out of context to cause harm.
- Bot network:** automated accounts amplifying content at scale to manufacture apparent consensus.
- Deepfake:** AI-generated audio, image or video convincingly imitating a real person or event.
- Hashtag hijacking:** flooding an institution's own campaign tag so its channel delivers the attacker's message.
- Truth sandwich:** correction format. Fact, brief flag of the falsehood, fact again. Never headline the lie.
- Geo-metadata / EXIF:** location and device data embedded in photos; a selfie's coordinates are accurate to metres.

- Disinformation:** false content created and spread deliberately to deceive.
- CIB:** coordinated inauthentic behaviour: networks of accounts acting in concert while posing as unconnected individuals.
- Sockpuppet:** a fake persona operated by a real person, farmed for credibility before use.
- Cheapfake:** real media manipulated with simple tools, recaptioned, recut, slowed, or miscontextualised.
- Pre-bunking / inoculation:** building audience resistance before an attack by exposing the technique in advance.
- Holding statement:** the first-hour message: aware · acting · when we will speak again.
- Credibility bank:** trust accumulated through peacetime deposits of helpful, human, truthful content, withdrawn in crisis.
